2165

DATE MAILED: 07/21/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.		Applicant(s)	
	09/675,399		BILICKA ET AL.	
	Examiner		Art Unit	
	Tony Mahmoudi		2165	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 01 May 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-14 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-14 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 09 June 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Remarks

1. In view of the Appeal Brief filed on 01-May-2006, PROSECUTION IS HEREBY REOPENED. New grounds of rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

- 
2. Claims 1-14 are presently pending in the application, of which, claims 1 and 9 are presented in independent form.

Claim Objections

3. Claims 1-2, 9 and 11 are objected to because they recite a function following the term *for* (e.g., “system *for* use by clients” in claim 1, line 1; “communication link *for* access by an

Art Unit: 2165

authenticated user” in claim 1, line 4; “session assignment *for* accessing” in claim 2, line 4; “identifying clients *for* access” in claim 9, line 4; and “identifying clients *for* accessing” in claim 11, line 2), which indicates “intended use”.

Claim elements following the term *for* are not interpreted as functional requirements of the claims, unless the claims are amended to recite the limitations in an affirmative format (i.e., “system **used by** clients” instead of “system **for use by** clients”, and “communication link **providing access**, by an authenticated user....” instead of “communication link **for access** by an authenticated user.....”, in claim 1.)

Appropriate corrections are recommended in order to consider the limitations following the term *for* as required functional elements for the above claims.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 3 recite the limitation, “adapted to”, which renders the claim indefinite.

Neither the specification or the claims of the instant application defines the term “adapting”.

Art Unit: 2165

For the purpose of continued examination of this application, the examiner interprets “adapted to” to mean “configured to”.

Claims 2-9 are rejected under 35 U.S.C. 112, second paragraph, as dependents of independent claim 1.

Appropriate corrections are required.

Claim Rejections – 35 USC § 101

6. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

7. Claims 1-14 are rejected under 35 U.S.C. 101 because they include non-statutory subject matter.

Claim 1 recites, “an automated authentication handling system”, “comprising a server adapted to establish a two-way trusted communication link”. The claim fails to establish a clear result (leave alone a “tangible”, “concrete”, and “useful” result.)

Claim 9 recites, “a method for automatically authenticating a client” comprising the steps of “identifying clients”, and “establishing a two-way trusted communication link between a client and an application server....”. the claim fails to establish a tangible result.

“Establishing” a “two-way trusted communication link” appears to be a decision based on whether or not the user is authenticated and further depending on a list of application servers

Art Unit: 2165

associated with a client identifier. Neither independent claim mentioned above communicates or presents the result (“establishment of the link”) to the user. Nor is any indication of such “established communication” stored anywhere in memory.

Claims 2-8 and 14 are rejected under 35 U.S.C. 101 as dependents of rejected claim 1.

Claims 10-13 are rejected under 35 U.S.C. 101 as dependents of rejected claim 9.

Appropriate corrections are required.

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gudbjartsson et al (U.S. Publication No. 2001/0027519 A1, hereinafter referred to as Gudbjartsson) in view of Reed et al (U.S. Patent No. 5,862,325, hereinafter referred to as Reed.)

As to claim 1, Gudbjartsson teaches an automated (see Abstract and see paragraph 3) authentication handling system (see paragraphs 8, 10, and 31) for use by clients (see paragraphs 29 and 31) on a network (see paragraphs 29, 31 and 34) comprising:

an authentication server (see paragraph 31, where “authentication server” is read on “system server 101 authenticates the user”) adapted to establish a two-way (see paragraphs 8, 29 and 30) trusted communication link (see “secure environment” in paragraphs 7 and 9; and see paragraphs 29 and 30, where “trusted” is the security provided by the ‘firewall 202’) associated with a client identifier (see “personal identifiers” in paragraphs 30 and 56.)

Gudbjartsson does not teach a link for access by an authenticated user to a list of application servers.

Reed teaches a computer-based communication system (see Abstract), in which he teaches a link (see column 26, lines 60-66) for access by an authenticated user (see column 26, lines 14-16) to a list of application servers (see figures 30, 31A, and 31B, and see column 103, lines 61-67, and column 104, lines 24-30.)

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified **Gudbjartsson** by the teaching of **Reed**, because including a link for access by an authenticated user to a list of application servers, would enable the system to provide secure means for authenticated clients to access desired web sites hosted by various servers throughout a network. For example, the system can provide a directory of partner service servers to the users, as taught by **Reed**.

As to claim 2, **Gudbjartsson** as modified teaches wherein the authentication server (see **Gudbjartsson**, paragraph 31, where “authentication server” is read on “system server 101 authenticates the user”) includes:

an identification engine configured to maintain collections of session assignments for accessing the application servers, each of the session assignment collections being associated with the client identifier (see Gudbjartsson, paragraphs 6-8, where “session assignment” is read on “security zones or domains”).

As to claim 3, Gudbjartsson as modified teaches wherein said identification engine is adapted to receive client identifiers from said clients (see Gudbjartsson, paragraph 56) to establish authenticated users (see Gudbjartsson, paragraph 37) and responsive thereto to provide a user interface to access said application servers according to said associated session assignments (see Gudbjartsson, paragraph 29.)

As to claims 4 and 5, Gudbjartsson as modified teaches wherein the authentication server (see Gudbjartsson, paragraph 31, where “authentication server” is read on “system server 101 authenticates the user”) includes:

a communication initiator engine (see Gudbjartsson, paragraph 39) configured to establish the trusted communication link between the authenticated users and an application server (see Gudbjartsson, “secure environment” in paragraphs 7 and 9; and see paragraphs 29 and 30, where “trusted” is the security provided by the ‘firewall 202’.)

As to claim 6, Gudbjartsson as modified teaches wherein the session assignments include data fields (see Reed, column 67, line 64 through column 68, line 3) selected from

Art Unit: 2165

the group consisting of session timeout and application access level (see Reed, column 70, line 63 through column 70, line 10.)

As to claim 7, Gudbjartsson as modified teaches wherein the client identifier includes a user id (see Gudbjartsson, paragraph 35, where “user id” is read on “username”) and password (see Gudbjartsson, paragraphs 50-54.)

As to claim 8, Gudbjartsson as modified teaches wherein the authentication server (see Gudbjartsson, paragraph 31, where “authentication server” is read on “system server 101 authenticates the user”) includes a processor under the control of software (see “central processing unit” in Gudbjartsson, paragraph 25) to:

receive an authentication signal from the client (see Gudbjartsson, paragraph 56, and see Reed, column 28, lines 25-37);

provide an application access interface to the client in response to the authentication signal (see Reed, figures 22-24); and

establish the trusted communication link between the client and an application server selected from the application access interface (see Gudbjartsson, “secure environment” in paragraphs 7 and 9; and see paragraphs 29 and 30, where “trusted” is the security provided by the ‘firewall 202’.)

As to claim 9, Gudbjartsson teaches a method for automatically authenticating a client (see paragraphs 10 and 31) for a servers (see paragraphs 29 and 31) comprising the steps of:

Art Unit: 2165

providing an authentication server (see paragraph 31, where “authentication server” is read on “system server 101 authenticates the user”);

identifying clients for access to the application servers by the authentication server (see paragraphs 7 and 35.)

Gudbjartsson does not teach a plurality of application servers and a link for access by an authenticated user to a list of application servers associated with a client identifier.

For the above teaching, the applicant is directed to the remarks and discussions made in claim 1 above, in view of the teachings of **Reed**.

As to claim 10, **Gudbjartsson** as modified teaches wherein the identifying step includes: providing session parameters for each of the identified clients for at least one of the application servers (see **Gudbjartsson**, paragraphs 6-8, and see **Reed**, column 34, lines 18-47.)

As to claim 11, **Gudbjartsson** as modified teaches wherein the identifying step includes: providing a user interface to the identified clients for accessing the application servers (see **Gudbjartsson**, paragraphs 35 and 50-54, and see **Reed**, column 68, lines 9-13.)

As to claim 12, **Gudbjartsson** as modified teaches wherein said establishing step includes:

using said session parameters (see Gudbjartsson, paragraphs 6-8) to establish said trusted communication link (see Gudbjartsson, “secure environment” in paragraphs 7 and 9; and see paragraphs 29 and 30, where “trusted” is the security provided by the ‘firewall 202’.)

As to claim 13, Gudbjartsson as modified teaches wherein the user interface includes a listing of application servers (see Reed, figures 30, 31A, and 31B, and see column 103, lines 61-67, and column 104, lines 24-30) and the establishing step is initiated following a selection of an application server by a user from the user interface (see Reed, column 26, lines 47-64.)

As to claim 14, Gudbjartsson as modified teaches the method further comprising a plurality of application servers connected to the network (see Reed, figures 30, 31A, and 31B, and see column 103, lines 61-67, and column 104, lines 24-30), each requiring authentication for access (see Gudbjartsson, paragraphs 37 and 48, and see Reed, column 153, lines 20-23.)

Response to Arguments

10. Applicant's arguments filed in the Appeal Brief filed on 01-May-2006 with respect to the rejected claims in view of the cited references have been fully considered but they are moot in view of the new grounds for rejection.

Art Unit: 2165

Conclusion

11. Any inquiries concerning this communication or earlier communications from the examiner should be directed to Tony Mahmoudi whose telephone number is (571) 272-4078. The examiner can normally be reached on Mondays-Fridays from 08:00 am to 04:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey Gaffin, can be reached at (571) 272-4146.
